H&M NetWorks Selects MobileAccess as Preferred DAS Solution

H&M NetWorks, a national wireless networking design and integration firm, announces that it has chosen MobileAccess DAS equipment as its preferred solution for In-building Distributed Antenna Systems. H&M has been working with MobileAccess gear in the carrier, federal, and enterprise markets. Mark Lehman, VP, H&M NetWorks notes, "MobileAccess has a technologically advanced solution which fits well with our customers' needs. Their engineering support team is second to none, and we have worked collaboratively to solve some complex networking requirements."

"H&M is a very stable company with years of experience and national network of technicians. They are a trusted partner," said Kevin Hussey, Vice President of Channel Sales, MobileAccess. Peter Murray, H&M's Wireless Program Manager states, "Our wireless program is focused on mobile broadband infrastructure solutions which utilize Distributed Antenna Systems and Wi-Fi. We're helping make 4G wireless capacity and coverage a reality."

About MobileAccess

MobileAccess is a provider of reliable wireless coverage solutions for all indoor wireless environments. MobileAccess' solutions platform delivers wireless connectivity in enterprises of every size, and has become the industry standard in the healthcare, hospitality and higher education markets. MobileAccess' legacy of innovation and proven architecture set the bar for indoor wireless peak performance, ensuring customers can meet current wireless demands as well as easily expand with future applications and services. Thousands of organizations worldwide rely on MobileAccess including: Clarian Health, the Comcast Center, M Resort Spa Casino, Ford Field, GAN Tower (Paris), Grand Lakes Orlando, the Dutch Parliament building (Netherlands), Hearst Corporation, Melbourne Australia Airport, Northwestern Memorial Hospital, Royal Dutch Shell, and the University of Phoenix Stadium.
